

Abstract of the Disclosure:

A storage device is disclosed and is characterised in that the data to be stored therein can be automatically and repeatedly stored in the device and/or in that additional information  
5 dependent on the data to be stored therein can be generated and stored in addition to the data to be stored and/or in that the data to be stored can be consecutively read under different conditions. Thus, the data originally stored in the storage device can be rapidly and easily reconstructed.
